

**DAT, Inc. 7715 Corporate Blvd., Plain City, OH 43064, 1-800-733-8644**

Data/Analysis Technologies, Inc. (DAT) provides quality analytical products which are timely and cost effective. Our technical experience in applying EPA Methods to a variety of matrices is derived from the combined efforts of Dr. Mitchum, who as the lead scientist implements methods in the laboratory, approves their use and reviews work products to assure method performance. Dr. Mitchum developed many of the EPA Methods in use today and implemented these methods in EPA. As an environmental scientist and quality assurance expert he also assures the methodology is applicable. He also brings to the company valuable skills, which are used on each client's program, through extraction, calibration and operation of the equipment necessary to perform the analysis requested.

DAT is a provider of high quality Analytical Services for subcontracting laboratory services, air toxics and stack testing analytical services, pharmaceutical methods development, food and flavor chemistry and endocrine disruptor chemical analysis including non-ionic surfactants and PCDD/PCDF and PCB analysis.

The laboratory was founded in 1991 by Dr. Ronald Mitchum and was the quality assurance, agrochemical and specialty analytical services division of Triangle Laboratories, Raleigh, NC.

Data Analysis Technologies obtained ownership of Triangle Laboratories-Columbus in 1995 and continues to provide subcontracting laboratory services focused in environmental, air toxics, stack testing analytical services, pharmaceutical methods development, industrial research and food and flavor chemistry analysis. The DAT Laboratory facility was constructed in 1999 as a dedicated 10,000 sq ft facility located on two acres in the Columbus, Ohio suburb of Plain City. The facility was constructed as a laboratory, incorporating the requisite air handling and UPS power supplies which are critical for the continued and consistent operation of the facility.

The organizational structure allows our clients to obtain the services of a small laboratory providing that personal touch, fast turnaround and competitive pricing.

DAT provides a complete analytical report containing all the QA/QC, chromatograms, blanks and standards necessary to completely validate the data package or a summary of analysis. A concise reduced format report is also available to support the needs of our clients.
